DoorBird and KIWI announce collaboration

Berlin, 31st July 2018 - The Bird Home Automation Group, manufacturer of DoorBird IP video intercoms, and the PropTech company KIWI.KI GmbH announced their collaboration today. The DoorBird D301, the IP Upgrade for analog door intercoms, is now compatible with the KIWI locking system. The companies have partnered to create an integration solution ideal for businesses requiring the ability to access clients' residences to perform contracted services. Businesses providing home and elder care as well as cleaning and grounds keeping services can now flexibly manage and open authorized doors using the KIWI keyless access control platform.

The DoorBird D301 enables tenants in apartment buildings to convert their existing analog door intercoms into app-based, smart door intercoms. When a visitor rings at the entrance door, the user receives a push notification on their smart device. The user can then speak with the visitor and open the house or apartment door using the DoorBird App. This allows for secure keyless access to the entrance area of the apartment building and, optionally, to the apartment.

With KIWI doors can also be opened keylessly. The PropTech (Property Technology) company offers a digital locking system for doors of apartment buildings. The KIWI transponder, app, and portal allow users to open doors and manage access privileges digitally. This way, KIWI digitizes key management for the housing industry and, moreover, serves as a platform for services that require access to buildings and apartments, such as parcel services or garbage collection companies.

“The integration of DoorBird into the KIWI platform benefits businesses providing home and elder care in particular, as they can now manage and open house and apartment doors easily. This new branch of business strengthens our market position as the leading manufacturer of IP door intercoms and smart upgrades for analog doorbells with the widest variety of compatibility options,” says Sascha Keller, CEO of the Bird Home Automation Group.

“With DoorBird we can expand our product portfolio, offering our customers even more flexible use of KIWI. We are especially pleased that DoorBird is a technology company based in Berlin, just like KIWI,” says KIWI co-founder and Executive Director Claudia Nagel explaining her reasons for the cooperation.

About Bird Home Automation

The Bird Home Automation Group develops, produces and markets high-quality IP video door intercoms under the trademark “DoorBird” around the world. The company’s headquarters and production plant are located in Berlin, Germany, with a further office in San Francisco, USA. “DoorBird” stands for the combination of exclusive design with the most innovative IP technology in the field of door communication. The products are made from corrosion-resistant precious metals and manufactured in Germany according to the highest quality standards. For more information, visit www.doorbird.com.

About KIWI.KI GmbH

KIWI is the keyless access system for front and apartment doors of apartment buildings. Access authorizations can be centrally managed via the KIWI portal. Building managers no longer need to run around buildings or have to worry if they have the right key at the right time and the right place. More than 60,000 residential units are connected to the KIWI infrastructure, and KIWI’s customer base includes over 500 housing companies. KIWI is a

service of KIWI.KI GmbH. The company, which is headquartered in Berlin, was founded in February 2012. Its CEOs are Karsten Nölling, Chairman of the Board, and Dr.-Ing. Claudia Nagel. Further information is available at www.kiwi.ki
